ARCHITECTURAL & COMMERCIAL

SmartStone has been the supplier of choice of paving products for prestigious projects since the 1980s. Our manufacturing facilities, technical expertise, reliability and innovative product range gives the professional in the built environment the assurance of a superior end result.

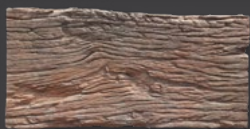

With our in-house pattern and mould manufacturing facility, we are able to create unique and custom-made products for specific projects, and are not dependant on third parties for our moulds. SmartStone also has a 'mould bank' which makes moulds available to branches specifically for commercial projects, where the quantities are often substantial.

SmartStone has won numerous industry awards, including the South African Concrete Manufacturers Association (CMA) Premier Award twice. Visit www.smartstone.com.na for details of some of the prestigious projects that we have supplied. SmartStone's textures, colours and sizes allow for creativity and style, and for unique designs.

You can DESIGN WITH SMARTSTONE.

COLOUR GUIDE

define unique experiences - your choice will dictate your style

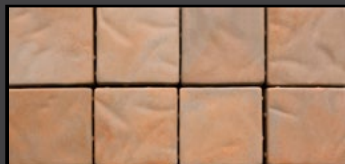

Our blended colours vary from paver to paver, creating a random organic effect. We recommend viewing a number of sample pavers together in order to perceive the holistic picture of any single colour.

PORTLAND GREY

CHARCOAL

SANDSTONE

TERRACOTTA

PLUM

Important aspects to consider when buying SmartStone:

- The correct installation and maintenance of SmartStone products is absolutely essential for their aesthetic appeal and longevity. Please refer to our website for our Installation Guide, recommended Grouting and Sealants, and Cleaning and Maintenance Guide.
- SmartStone is manufactured using concrete - and concrete has inherent characteristics. Concrete is the most commonly used and trusted construction material in the world due to its strength, versatility and longevity. A concrete product is "alive" and evolves and weathers over its lifetime, as does SmartStone. Please refer to our website for information on natural phenomena that can influence concrete, and your SmartStone during its lifetime.
- Concrete is made from natural materials which are mined and crushed, and resulting aggregates are never exactly the same colour. These differences reflect in the form of slight colour variations. It is therefore important to mix the product from different packs during installation.
- The density of SmartStone concrete is approximately 2350kg/m³, the strength is 25 MPa (minimum); the mass as per respective product pages.
- Due to photographic and printing processes, the colours in this document may not be 100% accurate.
- Most SmartStone products are hand-made using flexible moulds, which provides their unique aesthetic beauty. Variations in size of up to 6-8 mm can occur.
- The size of SmartStone products indicates coverage once installed, allowing for the following grouting gaps. Flagstones, Tiles and Cladding: 8-12 mm, Cobbles: 3-6 mm.
- Applications: SmartStone flagstones, tiles and cobbles come in four thicknesses, each designed to carry different loads, and suited to specific applications.
 - 15 – 20 mm tiles - for indoor and outdoor use, but must be installed on a concrete base.
 - 40 mm - suitable for pedestrian traffic; used to pave courtyards, walkways, around pools and patios.
 - 50mm - suitable for light vehicle traffic; such as residential driveways.
 - 60 - 80mm - suitable for heavier traffic and used for commercial driveways and roadways.
- SmartStone has a wide range of products, available in a variety of colours, textures and sizes – there is a product suited to every design style – from traditional to classical to contemporary. SmartStone products are also designed to be installed in a number of different patterns. Refer to our website for examples of popular laying patterns.
